

This guide will help you set up your mobile with a Windows 8 Operating System so you can connect to the internet.

You may need your mobile user manual. If you don't have a copy, you can find it online. Search manufacturer's name, model of your handset & user manual (eg. HTC HD7 user guide).

As there are several manufacturers of mobiles running these operating systems there may be some small differences with buttons or menus in the instructions that follow. We've come up with the basic steps required to get you up and running with the internet.

Please note you cannot have both internet and MMS setup at the same time.

Some key terms

What do we mean by **'TAP'** and **'PUSH'**? **'TAP'** means using your touch screen. **'PUSH'** means pushing the hard buttons on your phone.

What is **APN**? **APN** stands for Access Point Name. Setting up the APN on your handset will let you access the internet using your mobile phone.

To setup Internet and MMS Settings follow these steps:

- Access the MENU by sliding the screen in the direction of the arrow (from right to left)
- Scroll through the MENU until you reach SETTINGS and then tap on SETTINGS

 access point set up internet, MMS and internet sharing
3. Scroll through the SETTINGS menu until you reach ACCESS POINT and then tap ACCESS POINT

4. Tap ADD

5. Enter amaysim internet IN THE CONNECTION NAME FIELD
